Abdullah Mushtaq

SOFTWARE DEVELOPER

PROFILE SUMMARY

Computer Science undergraduate at FAST-NUCES Lahore with hands-on experience across web, desktop, game, and low-level programming projects. Focused on building reliable full-stack applications and strengthening CS fundamentals.

- Full-stack development with React, Node.js, Express, and SQL-backed APIs.
- Strong C++ and OOP foundation through desktop, game, and systems projects.
- Comfortable turning academic CS fundamentals into practical software.

SELECTED PROJECTS

Classroom Management System

React, Express, T-SQL

Role-based web platform for managing classroom workflows.

- Built authentication-aware flows for multiple user roles.
- Structured backend APIs for clean communication between React and Node.js.
- Designed SQL schema and queries for reliable classroom data retrieval.

Chippa Motors

C#, WinForms, 3-Layer Arch

Desktop business application organized around clear separation of concerns.

- Separated responsibilities to make the application easier to maintain.
- Implemented database operations behind a clear business-logic layer.
- Designed a practical interface for repeated operational use.

2D Dungeon Crawler - Penance

C++, Raylib

Real-time 2D game project focused on rendering and scalable game state handling.

- Implemented player movement, collision detection, and entity interactions.
- Used Raylib to manage rendering and responsive gameplay loops.
- Practiced modular C++ architecture for gameplay systems.

1v1 Chess Game

C++, SFML

- Modeled pieces with reusable OOP patterns.
- Implemented move rules and board interaction logic.
- Built a graphical interface using SFML.

Maze Rush

Assembly Language

- Low-level game demonstrating direct control over memory, registers, and flow.
- Applied CPU architecture concepts in an interactive project.
