Lahore, Pakistan

SKILLS

Frontend Dev

React JavaScript

TypeScript Tailwind CSS

Framer Motion

Backend & Cloud

Node.js FastAPI

Express.js Supabase

Docker

Core & Data

Python C++ SQL

Machine Learning Git

EDUCATION

BS Computer Science

FAST-NUCES Lahore

2023 - 2027

Intermediate Pre-Medical

Shalimar College Lahore

2020 - 2022

Matriculation

Govt High School for Boys

2018 - 2020

Abdullah Mushtaq

SOFTWARE DEVELOPER

PROFILE SUMMARY

A detail-oriented Software Developer and Computer Science undergraduate at FAST-NUCES Lahore, specializing in modern web technologies and full-stack architecture. Experienced in designing scalable, data-driven applications utilizing React, Node.js, and Python frameworks. Demonstrated ability to integrate advanced features—such as NLP pipelines and secure execution environments—into production-ready platforms.

- Full-Stack Architecture:** Deployed scalable platforms utilizing React, FastAPI, Node.js, and Supabase.
- Advanced Integrations:** Bridged robust backends with AI/ML pipelines (NLP) and Dockerized environments.
- Engineering Foundation:** Solid command of C++, Object-Oriented Design, and algorithmic problem-solving.

SELECTED PROJECTS

SENTI-MIND LIVE ↗

React, FastAPI, Supabase, ML

AI mental health companion detecting emotional states and clinical risks.

- Built a full-stack mental health tracking system using React and FastAPI.
- Trained a custom LinearSVC model with TF-IDF for clinical risk classification.
- Integrated HuggingFace models for real-time emotion detection.

Coding-Classroom LIVE ↗

React, Tailwind, Supabase

LMS frontend seamlessly integrated with a live coding IDE.

- Designed a pristine, premium glass/minimalist UI using Tailwind CSS.
- Integrated Monaco Editor for a dedicated execution environment.
- Built a dual-client architecture for teachers and students.

Chippa Motors

C#, WinForms, 3-Layer Arch

Desktop business application organized around clear separation of concerns.

- Separated responsibilities to make the application easier to maintain.
- Implemented database operations behind a clear business-logic layer.
- Designed a practical interface for repeated operational use.

2D Dungeon Crawler - Penance

C++, Raylib

Real-time 2D game project focused on rendering and scalable game state handling.

- Implemented player movement, collision detection, and entity interactions.
- Used Raylib to manage rendering and responsive gameplay loops.
- Practiced modular C++ architecture for gameplay systems.
